STUFF WE LOVE

Rinse bucket

Spin to dry

Fast roller cleaner

There are several products for cleaning roller sleeves on the market, but the Roller Ready tool stands out because it's so simple to use. It fits in the chuck of your drill, letting you spin off water as you rinse and clean your roller sleeve. The fully submersible, smooth design (no nooks and crannies for paint to get in) makes it really easy to clean when you're done.

To clean a roller, slip the sleeve onto the Roller Ready, spin it in and out of a bucket of water several times to rinse out the paint, then spin out the water. The sleeve will be dry and ready to use again in no time. You'll find the hard-plastic version for \$18 and a Pro Version made of aluminum for \$30 on Amazon.
